→ YER QOBIG'I OSTIDA

Yer qobig'i maketini yasash.

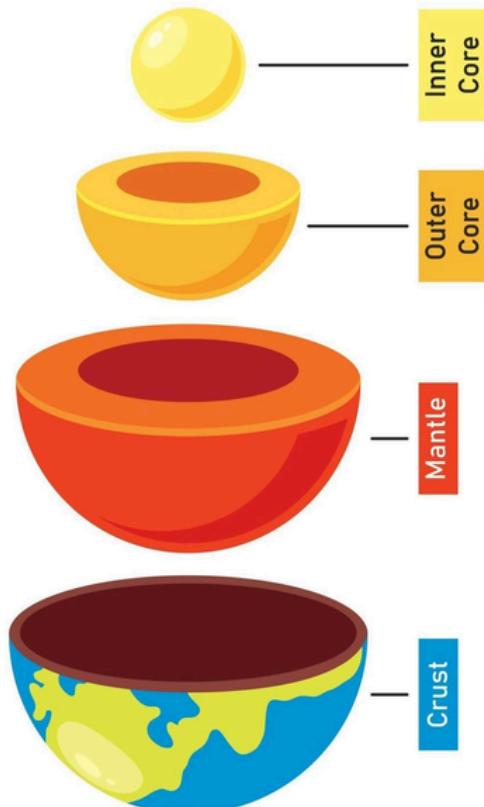

Qisqacha malumot

Biz deyarli butun vaqtimizni yer qobig'ida o'tkazamiz. Bu erda barcha quruqlik va okeanlar joylashgan. Ammo qobiq ostida juda ko'p narsa bor.

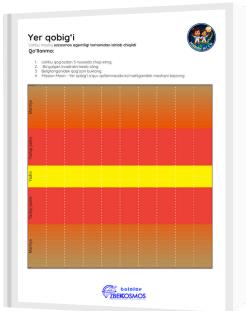

Qobiq olma terisiga juda o'xshaydi. Bu juda chuqur ketmaydi. Ammo bu siz qazishingiz mumkin bo'lganidan ham chuqurroqdir. Bu quruqlikda o'rtacha 19 milya (30 km) chuqurlikda. Okean tubida qobiq hali ham taxminan 3 milya (5 km) chuqurlikda.

Qobiq ostida Yerning eng katta qatlami joylashgan: mantiya. Mantiya Toshloq, asosan qattiq qatlam bo'lib, qobiq ostida sekin harakatlanadi. Mantiya 1800 milya (2900 km) chuqurlikka boradi. Mantiya ostida tashqi yadro joylashgan; u suyuq temir va nikeldan qilingan. Yerning markazida ichki yadro joylashgan. Bu temir va nikel metallaridan yasalgan mustahkam markaz.

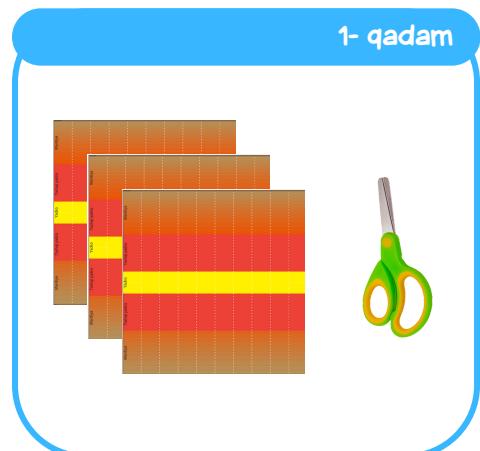

Kerakli jihozlar

- Yer qatlami maxsus chop etilgan qog'ozi (3 nusxa)
- Qaychilar
- Yelim
- Muzqaymoq tayoqchasi (2 ta)

→ 1- MASHQ: YER QOBIG'INI YASANG

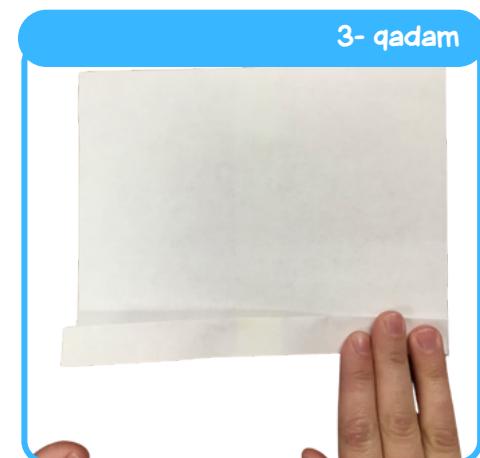

1. Rangli kvadrathni qirqib oling.

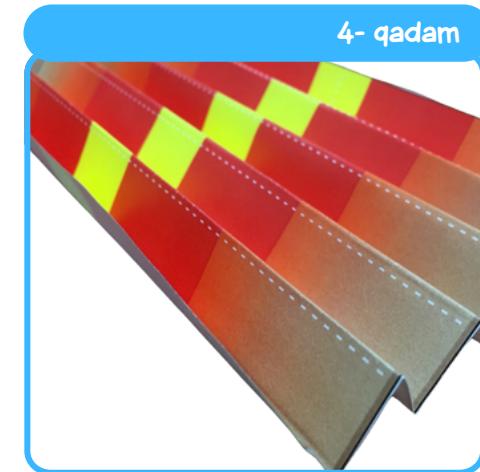

2. Oq rangli uzma chiziqlar boyicha buklang.

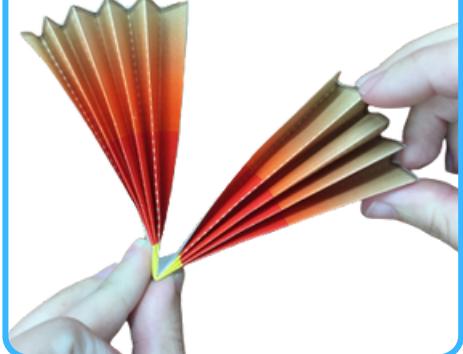

3. Kvadrat qog'ozni ogirib, 2- buklashni orqa tomonidan bajaring.

4. Qog'oz rasmdagi holatga kelguncha buklashni davom ettiring.

5- qadam

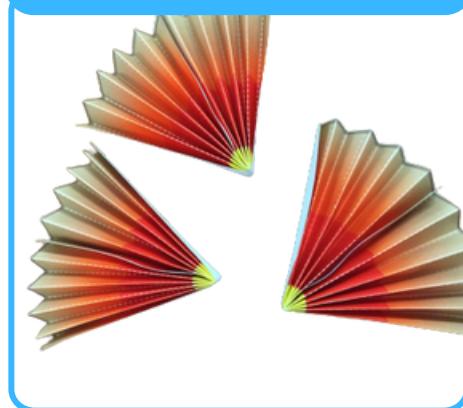

5. Boklangan qog'ozni o'rtaidan (yadro) boklang.

6- qadam

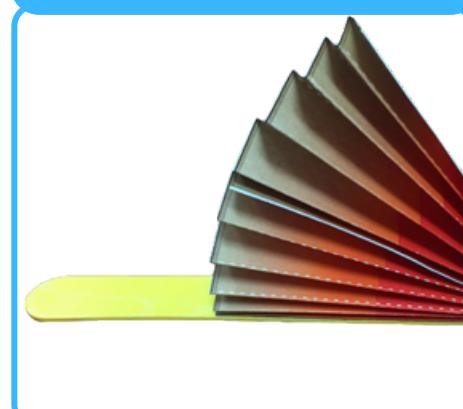

6. Qog'ozning yon tomonlarini yelimlang.

7- qadam

7. Harakatni 3-7 martta takrorlang.

8- qadam

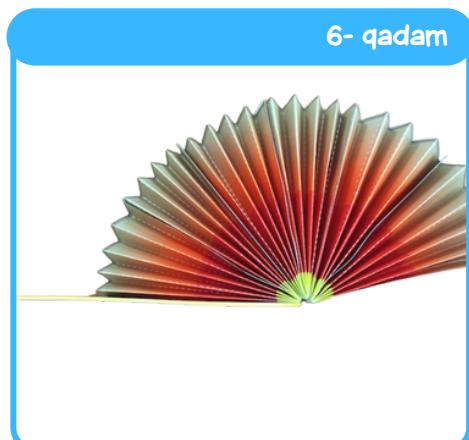

8. Muzqaymoq tayoqchasini qog'oz yoniga yelim yordamida yopishtiring

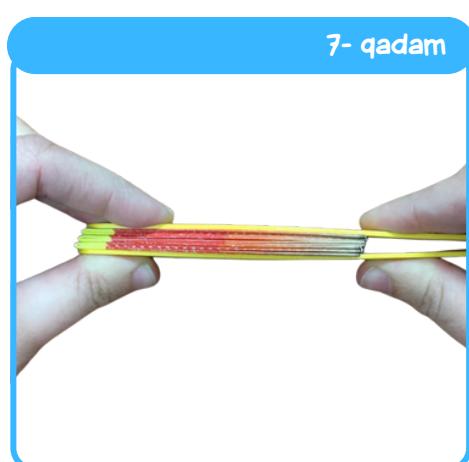

9. Tayoqchaga yopishgan va 2-qog'ozni bir biriga yopishtiring. Yadrolar bir joyda ekanligiga e'tibor bering.

10. 3-qog'ozni yam yuqorida aytilganidek yopishtiring.

11. 2- tayoqchani qog'ozlar ustidan yopishtiring.
Yaxshi yopishganiga ishonvh hosil qiling.

12. Yelim qurishini 5 daqiqa kuting.

13. Tayoqchalarни oching.

Yer qobig'i

Ushbu mashq **uzcosmos** agentligi tomonidan ishlab chiqildi

Qo'llanma:

1. Ushbu qog'ozdan 3 nusxada chop eting.
2. Bo'yagan kvadratni kesib oling.
3. Belgilanganidek qog'ozni buklang.
4. Mission Moon - Yer qobig'i o'quv qollanmasida ko'rsatilganidek mashqni bajaring
